

REDTAIL TELEMATICS

Website Image Production Brief

Designer handoff for priority website visuals

Field	Details
Project	new_redtail website visual upgrade
Prepared for	Designer / creative production
Prepared on	June 17, 2026
Primary goal	Replace placeholder and coded visuals with realistic product, platform, device, office, people, and industry imagery.
First batch focus	Homepage, Platform & Apps, Devices, Careers/Life, Contact, and Government industry page.

Creative objective

Make Redtail feel like a proven telematics company: real devices, real dashboards, real apps, real field operations, and practical product proof. Avoid generic SaaS art and abstract vehicle visuals.

How to use this document

- Start with Phase 1. These visuals create the biggest credibility improvement fastest.
- Each page brief includes the page route, deliverables, purpose, design direction, suggested filenames, and acceptance criteria.
- Use real product screenshots and existing product assets whenever possible. If a mockup is required, keep it realistic and anonymized.
- Keep source files editable in Figma or PSD and export optimized WebP files for development.

Global Creative Direction

The current site already has a strong technical foundation and good device product assets. The visual gap is proof: too many sections use coded mockups, placeholders, or repeated generic images. The new assets should make the platform feel real and deployed.

Do	Avoid
Use real dashboards, app screens, devices, installations, offices, teams, and fleet operations.	Generic stock photos, blurry roads, dark atmospheric vehicles, or abstract “future tech” graphics.
Use Redtail brand cues: black, white, red accents, restrained grays, clean UI framing.	Heavy gradients, fake neon interfaces, overdesigned illustrations, or images dominated by one flat color.
Anonymize all sample data: vehicle IDs, names, locations, plates, customers, and personal data.	Real customer names, real addresses, license plates, competitor logos, or identifiable private information.
Design images to crop well on desktop and mobile. Keep important content away from edges.	Tiny UI text placed at the edge of hero images where mobile crops will cut it off.

Export Standards

Asset type	Recommended export	Notes
Hero images	1800 x 1200 WebP minimum	Use for industry and page heroes. Keep subject centered enough for responsive crops.
Wide hero composites	2400 x 1400 WebP preferred	Use for homepage hero and product composite scenes.
Dashboard screenshots	1600 x 1000 WebP or larger	Provide clean desktop crops and a framed presentation version if needed.
Mobile app screenshots	Raw phone screenshots plus framed versions	Use realistic phone framing, but keep raw screenshots available for future layouts.
Source files	Figma or PSD plus exports	Use clear layer names and include editable variants.

Phase 1 Master Shot List

These are the first images to produce. They map directly to the highest-impact placeholder or credibility gaps in the website.

Priority	Page / route	Deliverable	Purpose
1	Homepage /	Main product hero composite	Show dashboard, mobile app, device, and fleet context in one credible first impression.
2	Platform & Apps /platform-and-apps	Live map, trip replay, geofence, status, reporting screenshots	Replace coded illustrations with believable platform proof.
3	Platform & Apps /platform-and-apps	Fleet App and Installer App mobile screens	Replace fake phone mockups with real mobile product visuals.
4	Devices /solutions/devices	Device installation and context photo set	Show hardware being installed and used in real vehicles/assets.
5	Careers /careers/life-at-redtail	Team, culture, engineering, and growth photos	Replace obvious placeholder illustrations with authentic company imagery.
6	Contact /contact-us	San Diego office image	Replace the coded map/location placeholder.
7	Government /industries/government	Government/public fleet hero	Replace generic navigation image with a specific public-sector fleet visual.

Design note

Most important asset

The homepage hero composite is the highest leverage image. It should tell a visitor in three seconds that Redtail provides telematics hardware, platform software, mobile apps, and fleet intelligence.

Page Brief: Homepage

Page	Homepage /
Primary deliverable	Homepage hero composite
Suggested file	/public/home/home-hero-platform.webp
Purpose	Replace the current building-led hero with a product-led image that immediately explains the business.

Required composition

- Desktop or laptop dashboard showing a live fleet map or operating dashboard.
- Mobile app screen next to the dashboard, showing Redtail fleet or installer app context.
- One real Redtail device, preferably from the existing device asset set.
- Fleet or operations background: vehicles, depot, installer, dispatcher, or field environment.
- Subtle Redtail red accents only. Do not make it look like a generic tech poster.

Acceptance criteria

- A non-technical visitor can understand “hardware + software + fleet tracking” quickly.
- The image still works if cropped to mobile portrait.
- No visible real personal data, customer names, license plates, or third-party branding.

Page Brief: Platform & Apps

Page	Platform & Apps /platform-and-apps	
Primary purpose	Replace coded map, geofence, status, reporting, and phone mockups with real product visuals.	
Visual tone	Clean SaaS dashboard, operational, precise, not decorative.	
Deliverable	Suggested filename	Purpose / screen contents
Live map dashboard	/public/platform/live-map-dashboard.webp	Map with vehicle pins, status panel, search/filter controls, active/idling/offline states.
Trip replay dashboard	/public/platform/trip-replay.webp	Route path, timeline scrubber, speed/stops/events, vehicle details panel.
Geofence editor	/public/platform/geofence-editor.webp	Map with polygon/radius zone, depot/site label, enter/exit alert settings.
Alerts/reporting dashboard	/public/platform/alerts-reporting-dashboard.webp	Alert summary, harsh events, speeding/incident cards, charts, export/report panel.
Fleet App screens	/public/platform/fleet-app-map.webp; fleet-app-vehicle.webp; fleet-app-alerts.webp	Mobile screens for live fleet map, vehicle detail/status, and recent trip or alerts.
Installer App screens	/public/platform/installer-app-scan.webp; installer-app-checklist.webp; installer-app-success.webp	Mobile screens for scan/enter device, install checklist, GPS/network/activation success.

Acceptance criteria

- Screens look like a real product, not placeholder UI art.
- Text is readable in desktop sections but not overcrowded.
- Data is anonymized and plausible: vehicle IDs, statuses, locations, and sample events should feel operational.

Page Brief: Devices

Page	Devices /solutions/devices	
Primary purpose	The site already has strong device renders. Add real-world context so buyers understand deployment.	
Suggested folder	/public/devices/context/	
Deliverable	Purpose	Direction
OBD plugged into vehicle	Explain self-install instantly.	Close photo in driver footwell or OBD port area; clean and well lit.
VAM-HUB hardwired install	Show professional installation context.	Installer hands, vehicle panel, or bench setup; keep wiring tidy and credible.
Rugged tracker mounted on equipment/container	Prove harsh-environment asset tracking.	Construction equipment, container, trailer, or outdoor asset.
Installer activating device with phone	Connect hardware to installer app workflow.	Show phone scan/checklist/activation success near device.
Device kit / packaging / accessories	Support rollout readiness.	Clean product layout with device, cable, label, quick-start card, and accessories.

Page Brief: Careers, Contact, Government

These three areas currently contain the most obvious non-product placeholders or generic images. They should be specific and human.

Page	Deliverables	Purpose / direction
Careers /careers/life-at-redtail	careers-engineering-culture.webp; careers-life-culture.webp; careers-growth.webp	Replace placeholder visuals. Use authentic team collaboration, engineering bench/product work, and culture/wellbeing/social activity.
Contact /contact-us	san-diego-office.webp; optional UK office interior	Replace the San Diego map placeholder. Use exterior or interior office image; avoid generic city skyline.
Government /industries/government	hero-government.webp	Specific public-sector fleet hero: municipal vehicles, utility/service fleet, government depot, or public works context. Optional subtle dashboard/map overlay.

Acceptance criteria

- Careers photos should feel like Redtail, not generic recruitment stock.
- Office images should make the company feel reachable and legitimate.
- Government hero should be clearly public-sector, not a generic truck or road image.

Phase 2 Backlog

Once Phase 1 is done, use this list to deepen the rest of the site. These are lower priority than the first batch but important for credibility and conversion.

Page / area	Images to create	Purpose
Fleet Management /solutions/fleet-management	Fleet operations hero with dashboard overlay; dispatcher using dashboard; vehicle status screenshot; route replay; maintenance alert.	Make operations, safety, and efficiency claims tangible.
Usage-Based Insurance /solutions/usage-based-insurance	OBD self-install; driver score dashboard; crash reconstruction screen; policyholder app; insurer analytics dashboard.	Prove insurance workflows and claims/risk value.
Reseller Program /solutions/reseller-program	Partner kit; reseller portal; training/support scene; co-branded sales material.	Show partners they receive a complete sellable program.
White Label /solutions/white-label	White-label app skins; branded portal mockups; before/after brand customization; multi-brand composition.	Make white-label flexibility concrete.
Our Technology /our-technology	Engineering lab hero; hardware testing/QA; manufacturing/assembly; connectivity visual; DataWarehouse/crash screen; analytics dashboard.	Replace coded technology visuals with proof of engineering depth.
About Us /about-us	Team/lab/company image; HQ interior; engineering team; leadership/group photo.	Add authenticity beyond the exterior building hero.
Resources /resources	Blog, guide, case study, and event fallback images.	Stop repeated carousel images from appearing when Sanity content lacks a custom image.

Industry Image Backlog

Industry page	Image direction	Purpose
Car Rental	Rental lot, branch return/check-out, connected rental vehicles.	Show rental-specific workflow and asset protection.
Construction	Heavy equipment with tracker, jobsite vehicles.	Make rugged asset tracking credible.
Education	School bus depot plus route visibility dashboard.	Support student transport safety and accountability.
Emergency Vehicles	Ambulance/fire/police fleet dispatch or readiness scene.	Support response-time and fleet-readiness claims.
Field Services	Technician vans, service routing, mobile worker context.	Show route and service productivity.
Food & Beverage	Refrigerated delivery, cold-chain fleet, temperature monitoring screen.	Support compliance and delivery reliability.
Transportation & Logistics	Loading dock, delivery trucks, ETA/live map dashboard.	Support route visibility and delivery operations.
Passenger Transit	Shuttle/bus route, depot, on-time performance screen.	Support service reliability.
Utilities	Utility trucks, field crews, equipment/asset tracking.	Support safety, uptime, and field response.

Final delivery checklist

- Every image has an exported WebP and editable source file.
- All dashboard and mobile screens use anonymized sample data only.
- No real license plates, personal data, customer names, or competitor marks are visible.
- Hero images are tested for desktop-wide and mobile portrait crops.
- Filenames follow the suggested path/name unless the developer requests a change.
- Designer notes identify which images are real screenshots, photo composites, or UI mockups.
